

AIR BAGS

Introducing: Super Flow Air Bags

The Fastest Way to Reduce Shipping Damage

Without SuperFlow Air Bags

SuperFlow

Air Bag is a Fast, Easy and Cost Effective System for Reducing Load Damage.

SuperFlow system efficiently secures loads in trailers, railcars, vessels and ocean containers. Its reusable design enables you to maximize your load securement dollars by reusing the same air bag multiple times where allowable. It's also 100% recyclable, making it the environmentally friendly choice for securing your loads.

With SuperFlow Air Bags

AIR BAGS

Reduce Load Damage With SuperFlow Air Bags

SuperFlow Inflator

- A 48" x 48" air bag can be inflated in only 8 seconds.
- The SuperFlow inflator is unique, utilizing both compressed and ambient air (Venturi Effect), enabling it to achieve unparalleled inflation speeds.
- The large diameter of our patented valve significantly reduces inflation and deflation time.
- The patented valve design allows the blue valve flapper to be manually depressed and locked open for fast deflation.
- The inflator and valve are quickly connected and securely interlocked to prevent air loss.
- By setting the desired pressure on the air line regulator, you can achieve consistent inflation. No more over-inflated or under-inflated air bag.
- Once the desired level of air pressure has been achieved, the SuperFlow inflator ceases to inflate the air bag. This reverses the air flow and redirects it out the back of the inflator. This also indicates to the operator that the bag is properly inflated, preventing over-inflation.
- The SuperFlow air bag prevents load shifting, reducing the risk of load damage and operator injuries. The Zebra stripes on the air bag help operators to determine whether the correct air bag size is being used in the void, ensuring maximum load security.
